

Driving the smart future

To support the green commute policy of the Macau SAR Government, CEM has been actively improving the electric vehicle (EV) charging network. We strive to increase the coverage in public car parks. China's national standard charging system and smart charging network management technology will be introduced to improve EV charging facilities.

Car owners just need to follow and bind CEM WeChat and start charging by simply scanning the QR code on the charger. It's easy and quick!

Power tampering can hold you criminally liable

CEM takes different measures to manage illegal electricity consumption, such as regular inspections, data analysis and smart device detection. Tampering for stealing electricity by connecting wires or enlarging the meter capacity without authorization not only endangers the safety of all occupants and the building, but is also subject to criminal liabilities. In addition, CEM will collect the corresponding charges in accordance with Macau laws.

One more action after selling or renting your premises

Upon selling or renting your premises, if the new owner/tenant does not change his/her contract name within 15 days, you should apply for the termination of electricity supply contract to avoid any responsibility of electricity related liabilities in the future, including but not limited to debts, illegal electricity consumption and anomalies of metering equipment found at the premises. Contractual liabilities only end after a contract ends.

Real time, Real easy!

Now you have 9 online options to settle your electricity bills with real time payment, including Bank of China, BNU, China Construction Bank, ICBC Macau, MPay App, NK+, UePay, Well Link Bank and most recently China Guangfa Bank.

Just download the designated collectors' mobile apps and fill in your contract number, and you are all set! If power supply has been disconnected, reconnection will be arranged automatically after settlement. Download now!
